

DEF Piping Systems by Rovanco

Rovanco is your trusted source for cost-effective DEF, double wall containment and specialty piping needs.

Rovanco manufactures Diesel Exhaust Fluid (DEF) piping systems designed to transfer fluids from your holding tanks to dispensers in either an Above Ground or Below Ground operation. All of Rovanco's DEF piping systems can be constructed utilizing any of the approved materials – HDPE, FRP or Stainless Steel.

Rovanco's most popular Above Ground system is made with a HDPE carrier pipe with electro-fusion fittings, but can be made of FRP or Stainless Steel as well. Above Ground systems also come with 1 or 2 tubes to accommodate heat trace wire(s). Below Ground systems are constructed of double wall containment pipe made from the approved material of your choice. These piping systems are made by Rovanco under strict quality standards – assuring you years of trouble-free operation.

With the new EPA regulations in place, the number of DEF filling stations across the U.S. will continue to grow. Rovanco has provided miles of DEF piping already for over **70** stations – so look to Rovanco for the experience you need and DEF piping systems that work.

See us this October at the PEI Tradeshow
in Chicago — Booth #7682!
